

Executive report

Synthetic example - complete collection

Executive report generated Sep 24, 2026, 12:00 UTC

Planning report, not an invoice. Azure values are preview estimates. Prices are USD scenarios, excluding tax and discounts.

Executive summary

Unique identities	Sources included	Sources skipped
16	1 / 1	0

Azure identity records: 32

Collection at a glance

Dataset: Source coverage

Collected: 1 included; 0 skipped

Interpretation: Included means some data was accessible, not that every dataset succeeded.

Dataset: Repository inventory

Collected: 4

Interpretation: 4 with complete default-branch activity. Visible scope only.

Dataset: Provider billing datasets

Collected: 2 complete; 0 partial; 0 unavailable

Interpretation: Each product/period has separate status; unavailable is not zero. See coverage details.

Dataset: Daily usage detail

Collected: 0

Interpretation: Raw usage rows, not seats. Summarized separately below; do not add to monthly aggregates.

Dataset: Enablement estimates

Collected: 2

Interpretation: Potential usage if enabled, not current charges. Two product rows can describe the same person.

Collected rows are evidence records, not licensed users. Usage subtotals keep source, scope, period, product and unit separate. Complete monthly usage summaries take precedence over overlapping daily detail; premium/AI breakdowns remain in the evidence appendix. Never add organizations to a parent enterprise or treat these amounts as invoices. Empty results and inaccessible datasets do not establish zero liability.

Azure DevOps

Measurement: Synthetic example data

Synthetic organizations: 1 included, 0 skipped

Identity records: 32; unique identities: 16

API version: 7.2-preview.3

Deterministic fictional fixture. No provider API or customer account was used.

Provider-reported Azure billing

Enablement scenarios use the provider estimate count, including when names are incomplete, at USD 30 for Code Security and USD 19 for Secret Protection per committer/month (list prices checked 2026-09-24). They are not actual charges or guaranteed incremental seats. Do not add an estimate to a billing snapshot or sum organizations sharing a subscription. Annualized means 12 unchanged months, not a forecast. No taxes, discounts, proration, legacy-bundle pricing or other Azure DevOps services are included. Unknown or disabled enablement does not establish invoice/payment status.

Azure billing and enablement scenarios

Organization: synthetic-ci-demo-azure

Product: Code Security

Provider enablement estimate count: 12

Monthly calculation: 12 x \$30.00/month

Enablement scenario monthly USD: \$360.00

Enablement scenario annualized USD: \$4320.00

Estimate basis: Provider count; identity detail incomplete

Organization: synthetic-ci-demo-azure

Product: Secret Protection

Provider enablement estimate count: 8

Monthly calculation: 8 x \$19.00/month

Enablement scenario monthly USD: \$152.00

Enablement scenario annualized USD: \$1824.00

Estimate basis: Provider count; identity detail incomplete

Azure billing enablement evidence

Organization: synthetic-ci-demo-azure

Product: Code Security

Product state (observed scope): Incomplete settings coverage

Monthly calculation: 12 x \$30.00/month

Estimate basis: Provider count; identity detail incomplete

Visible repository enablement: 2 enabled; 1 disabled; 1 unknown (visible repositories only)

Billing snapshot date UTC: 2026-09-23

Snapshot plan enabled: Yes

Snapshot billable count: 2

Provider enablement estimate count: 12

Unit price USD per month: 30

Enablement scenario monthly USD: \$360.00

Enablement scenario annualized USD: \$4320.00

Estimate detail status: partial

Snapshot count monthly equivalent USD (not invoice): \$60.00

Actual invoiced charges: Not collected; reconcile with the billing owner

Assessment: Provider enablement estimate priced as a standalone product scenario; not an invoice. Product enabled in the dated snapshot; estimate is not added to existing billed usage.

Organization: synthetic-ci-demo-azure

Product: Secret Protection

Product state (observed scope): Incomplete settings coverage

Monthly calculation: 8 x \$19.00/month

Estimate basis: Provider count; identity detail incomplete

Visible repository enablement: 1 enabled; 2 disabled; 1 unknown (visible repositories only)

Billing snapshot date UTC: 2026-09-23

Snapshot plan enabled: Yes

Snapshot billable count: 2

Provider enablement estimate count: 8

Unit price USD per month: 19

Enablement scenario monthly USD: \$152.00

Enablement scenario annualized USD: \$1824.00

Estimate detail status: partial

Snapshot count monthly equivalent USD (not invoice): \$38.00

Actual invoiced charges: Not collected; reconcile with the billing owner

Assessment: Provider enablement estimate priced as a standalone product scenario; not an invoice. Product enabled in the dated snapshot; estimate is not added to existing billed usage.

Azure billing estimate provenance

Organization: synthetic-ci-demo-azure

Warnings: SYNTHETIC DEMO: provider count available, identity names incomplete. Not actual charges.

Organization: synthetic-ci-demo-azure

Product: secretProtection

Provider estimate count: 8

Returned identity rows: 0

Status: partial

Collected at UTC: 2026-09-24T12:00:00.000Z

API version: synthetic-fixture-v4

Estimate source URL: <https://example.invalid/synthetic-estimates/secretProtection>

Price source URL: <https://azure.microsoft.com/en-us/pricing/details/devops/azure-devops-services/>

Warnings: SYNTHETIC DEMO: provider count available, identity names incomplete. Not actual charges.

Provider-reported daily billing snapshots, not invoices or Git activity estimates. Counts cover only the selected organizations.

Subscription totals require complete same-date identity lists and verified subscription scope. Pusher identity and committer email are different evidence; unmatched details are not automatically counted. Current security settings do not establish historical enablement.

Azure billing snapshots

Organization: synthetic-ci-demo-azure

Collection warnings

Report-wide warning: SYNTHETIC DEMO: all organizations, people, repositories and billing amounts are fictional. Not customer evidence or an invoice.

Usage and security evidence

Current settings do not prove recent scans or payment. Reported billing usage is not an invoice. Missing data is not zero. Daily activity uses GitHub authored dates (excluding two automation accounts) and Azure committer dates (including automation).

Azure DevOps other services: what-if estimates

Organization: synthetic-ci-demo-azure

Service / plan: Basic

Scenario quantity: 12

Unit: users

Monthly calculation: $\max(0, 12 - 5 \text{ free}) \times \$6$

Estimated monthly USD: \$42.00

Annualized USD: \$504.00

Basis: User-entered what-if

Prices checked UTC: 2026-09-24

Price source: <https://azure.microsoft.com/en-us/pricing/details/devops/azure-devops-services/>

Organization: synthetic-ci-demo-azure

Service / plan: Basic + Test Plans

Scenario quantity: 3

Unit: users

Monthly calculation: $3 \times \$52$

Estimated monthly USD: \$156.00

Annualized USD: \$1872.00

Basis: User-entered what-if

Prices checked UTC: 2026-09-24

Price source: <https://azure.microsoft.com/en-us/pricing/details/devops/azure-devops-services/>

Organization: synthetic-ci-demo-azure

Service / plan: Pipelines: Microsoft-hosted

Scenario quantity: 1

Unit: paid parallel jobs

Monthly calculation: $1 \times \$40$

Estimated monthly USD: \$40.00

Annualized USD: \$480.00

Basis: User-entered what-if

Prices checked UTC: 2026-09-24

Price source: <https://azure.microsoft.com/en-us/pricing/details/devops/azure-devops-services/>

Organization: synthetic-ci-demo-azure

Service / plan: Pipelines: self-hosted

Scenario quantity: 2

Unit: paid parallel jobs

Monthly calculation: 2 x \$15

Estimated monthly USD: \$30.00

Annualized USD: \$360.00

Basis: User-entered what-if

Prices checked UTC: 2026-09-24

Azure DevOps service pricing assumptions

Scope: Other Azure DevOps services

Assumptions: User-entered what-if quantities, not provider-observed usage or invoices. USD list prices checked 2026-09-24. Blank quantities are unknown, not zero. Basic users exclude Basic + Test Plans and users already covered by qualifying Visual Studio/GitHub Enterprise benefits; the free Basic allowance must be allocated correctly for the billing scope. Test Plans seats exclude qualifying included licenses and already include Basic. Pipeline quantities are paid parallel jobs, not runs or minutes; a first paid Microsoft-hosted job replaces the free job rather than adding a second. The free Microsoft-hosted grant (if approved) allows one job/1,800 minutes; self-hosted free capacity and subscriber benefits must be accounted for before entering paid jobs. Artifacts uses progressive GiB tiers per organization and assumes constant storage for a full month. AI credits are billable credits after applicable benefits, not requests. No tax, contract discounts, proration, or additional infrastructure costs. Annualized is 12 unchanged months, not a forecast. Do not sum organizations without checking shared licenses and allowances; security estimates and billing snapshots are separate and are not added here.

Recommended next steps

CIO decision brief

CIO decision summary

Readiness: Evidence incomplete

Summary: Azure DevOps: evidence incomplete. The collected scope includes 16 observed identities and 4 repositories. 3 active repositories warrant a security-setting review. Prioritize evidence validation and ownership before committing spend. No defensible savings estimate or overall security-health rating can be derived from this snapshot.

Methodology: Local rule-based analysis, not AI-generated advice. Based on the full collected provider scope, not screen filters. Priorities are suggested review order, not vulnerability severity. No savings, compliance conclusion or purchasing approval is established. Human review is required.

CIO evidence

Fact ID	Evidence
F1	Source coverage: 1 included, 0 skipped; 16 observed provider identities, not licensed seats.
F2	Inventory: 4 distinct repositories observed; 0 with unavailable activity and 4 with unknown or missing security-setting evidence. Inventory completeness is not independently verified.
F3	Security review: 3 active repositories have at least one explicitly disabled collected setting. A disabled default setup does not rule out a custom pipeline; enablement is not scanning success.
F4	Activity review: 1 repositories have zero observed default-branch commits in their complete collected windows. Windows can differ; inactivity is not proof a repository or license is unnecessary.
F5	Financial evidence: 2 modeled pricing rows, 2 provider-count enablement estimates, 2 readable billing datasets of 2 requested, and 0 daily usage rows. Datasets and detail overlap; row counts are not seats. Modeled costs are not actual charges; billing usage is not an invoice or proof of payment.
F6	Collection evidence: 0 partial, unavailable or not-requested dataset checks. Uncollected data is unknown, not zero.

CIO recommendations

Priority: P1

Recommendation: Close evidence gaps before a purchasing decision

Owner: Platform owner and reporting owner

Horizon: Next 7 days

Fact IDs: F1, F2, F6

Action: Confirm intended source coverage and review unavailable datasets. Request an authorized read-only export where access is missing; do not grant broader privileges merely to complete this report.

Priority: P1

Recommendation: Review disabled settings on active repositories

Owner: Security engineering and repository owners

Horizon: Next 7 days

Fact IDs: F3

Action: Review the repository inventory and approved security baseline, business criticality, exceptions and custom scanning pipelines. Validate actual scan results before proposing changes; do not automatically enable products.

Priority: P2

Recommendation: Validate ownership and retention for low-activity repositories

Owner: Engineering managers and repository owners

Horizon: Next 30 days

Fact IDs: F4

Action: Review releases, non-default branches, service dependencies and retention obligations with owners. Treat this as a review candidate list, not a deletion or license-removal recommendation.

Priority: P1

Recommendation: Reconcile modeled costs with entitlements and billing

Owner: FinOps and procurement

Horizon: Before renewal or purchase

Fact IDs: F1, F5

Action: Obtain per-product billable usage, Basic/Test Plans entitlements, included benefits, billing scope and contract prices. Validate organization-level identity deduplication before treating preview estimates as a purchase quantity.

Priority: P2

Recommendation: Measure security outcomes, not only enablement

Owner: Security engineering

Horizon: Next 30 days

Fact IDs: F2, F3

Action: Collect last successful scans, severity and age of open findings, remediation times and branch-policy coverage. Agree targets by repository criticality; current settings alone cannot establish effectiveness or compliance.

Priority: P2

Recommendation: Establish a repeatable baseline

Owner: Platform owner and FinOps

Horizon: Next reporting cycle

Fact IDs: F1, F4, F5

Action: Repeat the same source scope and date window after gaps are resolved. Compare authorized retained snapshots for usage, cost and remediation trends; this single snapshot does not establish improvement or savings.

Recommended collection

Dataset: Basic/Test Plans entitlements, included benefits and official billable committers

Decision supported: Establish actual purchase quantities and potential duplicate entitlements.

Access and limits: Review the collected billing snapshots and their coverage first. Seat entitlements and unresolved billing populations require an authorized owner export; this report does not establish complete license coverage.

Dataset: Invoices, billing scope, contract prices and discounts

Decision supported: Reconcile scenarios to actual spend; quantify savings only after eligibility and contractual review.

Access and limits: Billing-owner-approved export. Do not include payment details or credentials. Not collected by this feature.

Dataset: Last successful scans, finding severity/age and remediation times

Decision supported: Assess security effectiveness and prioritize remediation by business impact.

Access and limits: Existing security-report read access; collect aggregates, not source code or secret values. Not collected by this feature.

Dataset: Repository owners, business criticality and branch protection/policies

Decision supported: Assign accountability and distinguish justified exceptions from control gaps.

Access and limits: Existing repository metadata read access and owner confirmation. Not collected by this feature.

Dataset: Pipelines, Artifacts and parallel-job usage with entitlements

Decision supported: Assess non-security spend and utilization; keep compute/storage/AI usage separate from security licenses.

Access and limits: Existing usage-report access or authorized exports. Organization billing rows may cover some meters, but utilization and entitlement coverage are not established.

Resolve skipped sources, review identity matches, and verify official membership, product enablement and billable usage before making purchasing decisions. Costs are scenarios; overlapping counts are not an invoice total.

Cross-provider identities are not automatically merged. Skipped sources are excluded from totals.

Export notes

Unsupported PDF font characters appear as ?. CSV and HTML retain full Unicode text.

Executive report

Synthetic example - complete collection

Executive report generated Sep 24, 2026, 12:00 UTC

Planning report, not an invoice. Observed GitHub activity is not licensed-seat inventory or confirmed billable usage. Prices are USD scenarios, excluding tax and discounts.

Executive summary

Unique identities	Sources included	Sources skipped
18	1 / 1	0

GitHub identity records: 18

Collection at a glance

Dataset: Source coverage

Collected: 1 included; 0 skipped

Interpretation: Included means some data was accessible, not that every dataset succeeded.

Dataset: Repository inventory

Collected: 4

Interpretation: 4 with complete default-branch activity. Visible scope only.

Dataset: Provider billing datasets

Collected: 5 complete; 0 partial; 0 unavailable

Interpretation: Each product/period has separate status; unavailable is not zero. See coverage details.

Dataset: Daily usage detail

Collected: 3

Interpretation: Raw usage rows, not seats. Summarized separately below; do not add to monthly aggregates.

Reported usage subtotals

Source: synthetic-ci-demo-github

Scope: organization

Period UTC: 2026-09

Product: Synthetic metered product

Unit: requests

Gross USD: \$1.00

Discount USD: \$0.40

Net USD: \$0.60

Basis: usage-summary

Coverage: complete: Full calendar-month aggregate. Fictional overlapping datasets; do not add together.

Collected rows are evidence records, not licensed users. Usage subtotals keep source, scope, period, product and unit separate. Complete monthly usage summaries take precedence over overlapping daily detail; premium/AI breakdowns remain in the evidence appendix. Never add organizations to a parent enterprise or treat these amounts as invoices. Empty results and inaccessible datasets do not establish zero liability.

GitHub

Measurement: Synthetic example data

Synthetic organizations: 1 included, 0 skipped

Identity records: 18; unique identities: 18

API version: 2022-11-28

Deterministic fictional fixture. No provider API or customer account was used.

Estimated billing

Totals cover the full collected scope, not screen filters. Counts are product-specific estimates, not confirmed licensed seats. GHAS subtotals combine Code Security and Secret Protection costs; do not add subtotals to their component rows. Annualized estimates are monthly estimates x 12, not annual contract quotes. Other plans without usage evidence remain unpriced.

Cost scenarios (USD)

Solution	Quantity	Monthly	Annualized
GitHub Enterprise - observed-user scenario	18	\$378.00	\$4536.00
GitHub Code Security - what-if scenario	18	\$540.00	\$6480.00
GitHub Secret Protection - what-if scenario	18	\$342.00	\$4104.00
GHAS subtotal: Code Security + Secret Protection	18 Code Security; 18 Secret Protection	\$882.00	\$10584.00

GitHub Enterprise - observed-user scenario: 18 x \$21.00 = \$378.00 / month

Observed non-bot GitHub committers in the selected organization or enterprise report window. This is not a full enterprise member directory count.

Starting at USD 21 per user/month; checked 2026-09-24. <https://github.com/pricing> . Not a licensed-seat inventory; excludes contract terms, tax and discounts.

GitHub Code Security - what-if scenario: 18 x \$30.00 = \$540.00 / month

Assumes all observed identities require this product. Actual billability is unknown: repository visibility, product enablement, membership and pushes in the last 90 days are not verified. Authored-date activity is not a billing meter.

USD 30 per active committer/month; checked 2026-09-24. <https://github.com/security/plans> . Public GitHub.com security features may be free; excludes tax and discounts.

GitHub Secret Protection - what-if scenario: 18 x \$19.00 = \$342.00 / month

Assumes all observed identities require this product. Not confirmed billable usage; validate private/internal repository coverage, membership, product enablement and 90-day push activity.

USD 19 per active committer/month; checked 2026-09-24. <https://github.com/security/plans> . Separate from Code Security; excludes tax and discounts.

Provider-reported GitHub billing

Provider-reported GitHub billing evidence, not invoices or proof of payment. Do not add organizations to their parent enterprise, summaries to detail, or premium/AI usage to overlapping usage totals. Products and units remain separate. Security snapshots are current at collection, independent of the activity window; organization seats can overlap across an enterprise. Unavailable or empty responses do not establish free usage or zero liability.

Collection warnings

Report-wide warning: SYNTHETIC DEMO: all organizations, people, repositories and billing amounts are fictional. Not customer evidence or an invoice.

Usage and security evidence

Current settings do not prove recent scans or payment. Reported billing usage is not an invoice. Missing data is not zero. Daily activity uses GitHub authored dates (excluding two automation accounts) and Azure committer dates (including automation).

Recommended next steps

CIO decision brief

CIO decision summary

Readiness: Evidence incomplete

Summary: GitHub Enterprise: evidence incomplete. The collected scope includes 18 observed identities and 4 repositories. 3 active repositories warrant a security-setting review. Prioritize evidence validation and ownership before committing spend. No defensible savings estimate or overall security-health rating can be derived from this snapshot.

Methodology: Local rule-based analysis, not AI-generated advice. Based on the full collected provider scope, not screen filters. Priorities are suggested review order, not vulnerability severity. No savings, compliance conclusion or purchasing approval is established. Human review is required.

CIO evidence

Fact ID	Evidence
F1	Source coverage: 1 included, 0 skipped; 18 observed provider identities, not licensed seats.
F2	Inventory: 4 distinct repositories observed; 0 with unavailable activity and 4 with unknown or missing security-setting evidence. Inventory completeness is not independently verified.
F3	Security review: 3 active repositories have at least one explicitly disabled collected setting. A disabled default setup does not rule out a custom pipeline; enablement is not scanning success.

Fact ID	Evidence
F4	Activity review: 1 repositories have zero observed default-branch commits in their complete collected windows. Windows can differ; inactivity is not proof a repository or license is unnecessary.
F5	Financial evidence: 3 modeled pricing rows, 0 provider-count enablement estimates, 5 readable billing datasets of 5 requested, and 3 daily usage rows. Datasets and detail overlap; row counts are not seats. Modeled costs are not actual charges; billing usage is not an invoice or proof of payment.
F6	Collection evidence: 0 partial, unavailable or not-requested dataset checks. Uncollected data is unknown, not zero.

CIO recommendations

Priority: P1

Recommendation: Close evidence gaps before a purchasing decision

Owner: Platform owner and reporting owner

Horizon: Next 7 days

Fact IDs: F1, F2, F6

Action: Confirm intended source coverage and review unavailable datasets. Request an authorized read-only export where access is missing; do not grant broader privileges merely to complete this report.

Priority: P1

Recommendation: Review disabled settings on active repositories

Owner: Security engineering and repository owners

Horizon: Next 7 days

Fact IDs: F3

Action: Review the repository inventory and approved security baseline, business criticality, exceptions and custom scanning pipelines. Validate actual scan results before proposing changes; do not automatically enable products.

Priority: P2

Recommendation: Validate ownership and retention for low-activity repositories

Owner: Engineering managers and repository owners

Horizon: Next 30 days

Fact IDs: F4

Action: Review releases, non-default branches, service dependencies and retention obligations with owners. Treat this as a review candidate list, not a deletion or license-removal recommendation.

Priority: P1

Recommendation: Reconcile modeled costs with entitlements and billing

Owner: FinOps and procurement

Horizon: Before renewal or purchase

Fact IDs: F1, F5

Action: Obtain Enterprise seat assignments, official product-billable committer counts, billing scope and contract prices. Separate Enterprise seats, Code Security and Secret Protection; observed authors are not a billing population.

Priority: P2

Recommendation: Measure security outcomes, not only enablement

Owner: Security engineering

Horizon: Next 30 days

Fact IDs: F2, F3

Action: Collect last successful scans, severity and age of open findings, remediation times and branch-policy coverage. Agree targets by repository criticality; current settings alone cannot establish effectiveness or compliance.

Priority: P2

Recommendation: Establish a repeatable baseline

Owner: Platform owner and FinOps

Horizon: Next reporting cycle

Fact IDs: F1, F4, F5

Action: Repeat the same source scope and date window after gaps are resolved. Compare authorized retained snapshots for usage, cost and remediation trends; this single snapshot does not establish improvement or savings.

Recommended collection

Dataset: Enterprise seats, outside collaborators and official billable committers

Decision supported: Establish actual purchase quantities and potential duplicate entitlements.

Access and limits: Review the collected billing snapshots and their coverage first. Seat entitlements and unresolved billing populations require an authorized owner export; this report does not establish complete license coverage.

Dataset: Invoices, billing scope, contract prices and discounts

Decision supported: Reconcile scenarios to actual spend; quantify savings only after eligibility and contractual review.

Access and limits: Billing-owner-approved export. Do not include payment details or credentials. Not collected by this feature.

Dataset: Last successful scans, finding severity/age and remediation times

Decision supported: Assess security effectiveness and prioritize remediation by business impact.

Access and limits: Existing security-report read access; collect aggregates, not source code or secret values. Not collected by this feature.

Dataset: Repository owners, business criticality and branch protection/policies

Decision supported: Assign accountability and distinguish justified exceptions from control gaps.

Access and limits: Existing repository metadata read access and owner confirmation. Not collected by this feature.

Dataset: Actions, Packages and Copilot usage with entitlements

Decision supported: Assess non-security spend and utilization; keep compute/storage/AI usage separate from security licenses.

Access and limits: Existing usage-report access or authorized exports. Organization billing rows may cover some meters, but utilization and entitlement coverage are not established.

Resolve skipped sources, review identity matches, and verify official membership, product enablement and billable usage before making purchasing decisions. Costs are scenarios; overlapping counts are not an invoice total.

Cross-provider identities are not automatically merged. Skipped sources are excluded from totals.

Export notes
